Error Log Add Coins

```java
int TotalAmount = (quart * 0.25) + (dimes * 0.10) + (nicks * 0.05) + (pens * 0.01);

System.out.println("Total:" + TotalAmount);
```

When I was creating a variable for a total amount of dollars, I realized that I cannot create an integer variable, so as a solution, I used the Double function .

This is the correct way of doing it.

```java
double TotalAmount = (quart * 0.25) + (dimes * 0.10) + (nicks * 0.05) + (pens * 0.01);

System.out.println("Total:   " + TotalAmount);
```
