Error Log Lunch Order/Foods

```
System.out.print("How many sodas would you like? ");
int drinkqty = userinput.nextInt();

// Calculate the total price
double totalAmount = (burger.getPrice() * burgerQty) +
                     (greens.getPrice() * greensQty) +
                     (fries.getPrice() * friesQty) +
                     (drink.getPrice() * drinkQty);
```

I made the error of not being consistent with the capitalization of my variables. In code I know it is crucial that every character matters.

```
int friesqty = userinput.nextInt();

System.out.print("How many sodas would you like? ");
int drinkQty = userinput.nextInt();

// Calculate the total price
double totalAmount = (burger.getPrice() * burgerQty) +
                     (greens.getPrice() * greensQty) +
                     (fries.getPrice() * friesQty) +
                     (drink.getPrice() * drinkQty);
```

This is the fixed version.
